## **JAPANESE & ORIENTAL BEETLE TRAP**

### **DIRECTIONS FOR USE:**

- 1.** Unfold top of bag where panels are attached. Hold trap upside down to drop attractant cartridge and twist-tie out of bag.
- 2.** (FIGURE A) Panels have side flaps which form a funnel inside bag and restrict the opening to keep beetles from escaping. Notches at bottom of side flaps are shown as PART B and should be snapped onto thin posts shown as PART A. (FIGURE B) From outside of bag, push in on each side flap so that its notches snap onto the posts. Continue until all four sides are in place.
- 3.** Remove attractant cartridge from wrapper.
- 4.** (FIGURE C) Slip cartridge, flat side up, over hanging tab, line up slots and snap in place.
- 5.** (FIGURE C) Slip cartridge, flat side up, over hanging tab, line up slots and snap in place.
- 6.** (FIGURE D) Thread twist-tie through hole on top of center panels.
- 7.** Attach trap tightly with twist-tie to stake or pole 4 feet above ground, at least 30 feet from foliage to be protected.

## ***TRAP PLACEMENT:***

Place traps at least 30 feet from ornamental plants to lure beetles away from areas where they may cause damage. 1-3 traps provide control in the average yard. Do not place more than 8 traps per acre (1 trap per 10,890 square feet).

## ***EMPTYING AND REUSING:***

Open bottom of bag using handles and easy-lock opening, empty beetles into garbage sack and dispose in household trash. Press easy-lock opening back together to reseal it before rehung trap.
